Everything you need to know about driving electric

WHAT'S AN ELECTRIC CAR?

Powered by a rechargeable battery instead of a traditional, gas-burning engine, electric cars are simply a better way to drive. They accelerate faster, delivering a quick, quiet ride, and they eliminate the need to ever visit a gas station again.

Charging stations are installed at homes and offices and are becoming readily available on roads everywhere. The dashboard display includes speed and mileage like your gas-powered car, but instead of a gas gauge, a range monitor lets you know how far you can drive before needing a new charge. And the pedals work just like they do in your gas-powered car.

How is it different from a hybrid?

Drivers today have lots of options. Traditional hybrids like the Toyota Prius use both a battery and a gasoline engine to improve overall mileage, but they always burn gas. Other cars, like the Chevy Volt, can drive up to 50 all-electric miles on a charge but then start burning gas if you need to drive further. We can help you pick the technology that works best for you.

Why should I choose an electric car?

No more gas stations

You'll never have to stop for gas ever again. Charge your car at home overnight just like your phone, or at work if your employer offers workplace charging.

Top-of-the-line technology

The electric car dashboard display shows your battery's range, your current driving efficiency and navigation—all the must-have technology for today's driver.

0 to 60 in seconds

When you accelerate in an electric car, the power goes directly from the battery to the tires, creating some of the quickest acceleration times possible.

A cheaper drive

In the Pacific Northwest, electric car drivers pay \$0.99 to drive the same distance as a gallon of gas in a conventional car. They're cheaper to operate, with almost no maintenance costs. Just rotate your tires regularly and add fresh wiper fluid!

Turn down the radio

The next time you're in a conventional car, take a listen. We've all gotten used to the engine noise as part of the driving experience—but electric cars are nearly silent at all speeds.

Benefits for the economy and the environment

Electric cars are oil-free, produce 85% less carbon emissions and no smog, and can be powered by renewable energy sources like solar and wind.

What you need to know:

How long is your commute?

Even entry-level electric cars have a range of 80+ miles per charge—well within most of our daily commutes. For those going further, there are newer models with ranges of 200+ miles per charge.

Are there chargers where you work?

If there are, you instantly double your daily range! Car charging is becoming more and more common at the workplace, and some businesses will provide it if requested. Just ask.

Do you have access to charging where you live?

If you have a source of power where you park, you're all set. You can plug right into a regular 110v household outlet. If you want faster charging, you can install a home charger using the same high-voltage outlet that powers your laundry dryer or stove. If you live in a condo or apartment, see if the building can install public chargers or find one of hundreds of locally available public chargers at www.plugshare.com.

Are there fast chargers in your community?

Even if you don't have access to a charger in your building, you may be able to find a DC Quick Charger near you. These stations greatly reduce time spent charging—adding about 50 miles of range in about 20 minutes.

Still nervous about charging ahead?

Once you experience life in the electric fast lane, we're pretty sure you'll be convinced. Forth offers free, no-stress electric car test drives and multi-day car rentals.

More than just cars.

As communities become more efficient, they are transitioning more modes of transportation to electric—including buses and trucks—cutting pollution and long-term costs. Bikes, motorcycles and scooters can also be made electric to make your daily "to and from" more enjoyable.
